

## Telemedicine at Skilled Nursing Facility

Enable Healthcare Inc. (EHI) provides an innovative, state of the art, cost-effective Telemedicine solution SNFCARE™ CART for Skilled Nursing Facilities (SNF) which is a new and smart way to bring medical examinations, diagnosis and treatment services to a SNF resident/patient over a secure Telehealth internet network.

Telemedicine solution includes peripherals, such as stethoscope, otoscope and high quality zoom camera. This allows a SNF to bring their residents/patients face-to-face on a secure Telehealth platform with their physician or a physician of HCI Services Inc.

Physicians can quickly examine, diagnose and provide treatment options during off-hours emergency.

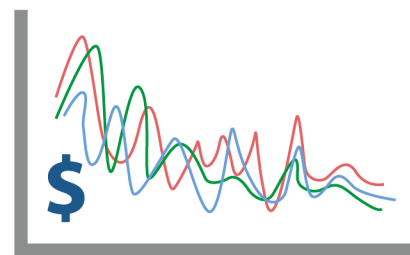

Nursing home residents in need of medical care when provider are not present including after-hours or on weekends, are often sent to hospital, where they have a greater chance of experiencing health complications after admission.

Evidence shows lack of physician access 24/7, results in frequent ER Visits or inappropriate hospitalizations of patients/residents.

## Facts

In a research supported by Commonwealth Fund, researchers assessed the potential of telemedicine. Their study compared nursing facilities that used telemedicine for after-hours care to homes that did not; key findings are listed below:

- ⦿ After the introduction of telemedicine service, hospitalization rates declined;
- ⦿ There was a significant decline in hospitalization rates at facilities that were deemed “more engaged” with the telemedicine service;
- ⦿ Based on reduced hospitalization rates of more-engaged facilities, Medicare and other Payers could expect an average of about \$151,000 in savings per nursing home per year. The annual cost of the telemedicine service was \$30,000 per nursing home, suggesting that there could be \$120,000 in net savings per year.

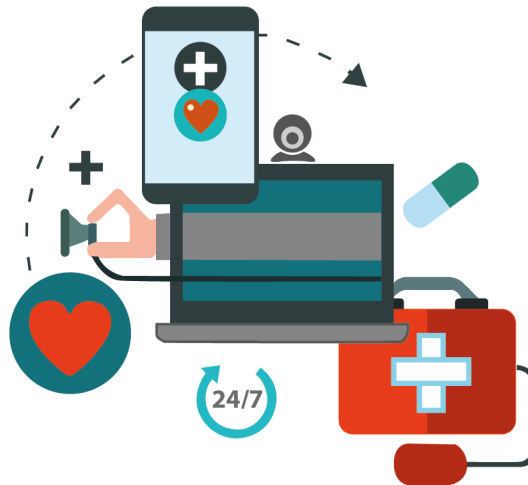

SNFCARE™ CART Telemedicine for SNF enables Physician to rapidly access Patient, diagnose and recommend treatment based on first-hand evaluation; all these tasks are done remotely. Provider is also able to invite a Specialist/Consultant to the session for immediate evaluation and management of the Patient's condition. This platform provides a greater level of patient care. Care teams of SNF have long recognized the impact of re-admission on the residents and their families. Proactive and stable Telemedicine Solutions for SNF will reduce such re-admissions.

With these benefits in mind, EHI believes telemedicine will become increasingly important for Skilled Nursing Facilities. Further, redundant and unnecessary re-admissions carry a wave of new penalties from changing rules which also can be avoided.

# SNFCARE™ CART

EHI SNFCARE™ CART offers everything required for a remote Clinician to assess an acute change in their resident/patient's condition at a SNF. SNFCARE™ cart allows for a secure HD video session with an integrated diagnostic digital stethoscope. Physicians can easily interact with patient and bedside nurse to assess and treat a sudden change in condition.

SNFCARE™ CART is a telemedicine system, designed for SNF clinical applications that need a lightweight system that can accommodate various telemedicine applications. Telemedicine platform is modular in design and makes it an ideal solution for facilities that need to start with a basic set up and then add on components and medical devices to support growth. This solution provides a complete workflow to suit SNF operations and provides a seamless integration with EHR through a RESTFUL API.

## SNFCARE™ Cart configuration

- ⦿ Dedicated Microsoft Surface Pro tablet
- ⦿ High Definition (HD) Pan Tilt Zoom (PTZ) camera with remote provider controls
- ⦿ Diagnostic Quality Digital Stethoscope
- ⦿ Wireless Bridge
- ⦿ Quality Ambient Room Headset/Microphone
- ⦿ Elegant light cart to house and secure all components
- ⦿ Unlimited Telemedicine Usage
- ⦿ 24 x 7 Provider and Remote Clinician Support (additional)
- ⦿ HIPAA Compliant platform
- ⦿ Workflow Engine
- ⦿ EHR integration (RESTFUL API)
- ⦿ Access Control
- ⦿ Collaboration – securely invite others
